

NEW Wireless IP Telephone!

Thursday, 25 January 2007

Toshiba is pleased to introduce another mobility solution for the Strata CIX family. Toshiba has entered into a strategic relationship with Hitachi Cable USA to resell the WirelessIP5000E-A telephone through authorized Toshiba dealers nationwide.

The WirelessIP5000E-A links with your IEEE 802.11 wireless local area network and enables you to take your direct line and extension number with you anywhere within your wireless LAN environment.

The WirelessIP5000E-A telephone helps extend the value of your resources and save money on every call. Since the wireless IP telephone utilizes your existing wireless LAN infrastructure, there's no additional wireless interface equipment required.
